

THE LIGHT KEEPER II™

A CRIME PREVENTION PHOTOCONTROL

Protects against intruders with flashlights from turning off streetlights or floodlights

A standard photocontrol can be triggered by an artificial light at night, fooling it into thinking it is daylight and turning off a streetlight or floodlight. The area is left in darkness and in danger.

Any thief or vandal with a flashlight or laser pointer can disable a perimeter light long enough to gain entry and perform illegal activity.

The LIGHT KEEPER II is the solution. The LIGHT KEEPER II is designed to protect streetlights and floodlights from artificial light from the ground causing unwanted operation, keeping secure areas well-lit. The LIGHT KEEPER II replaces standard twist lock photocontrols.

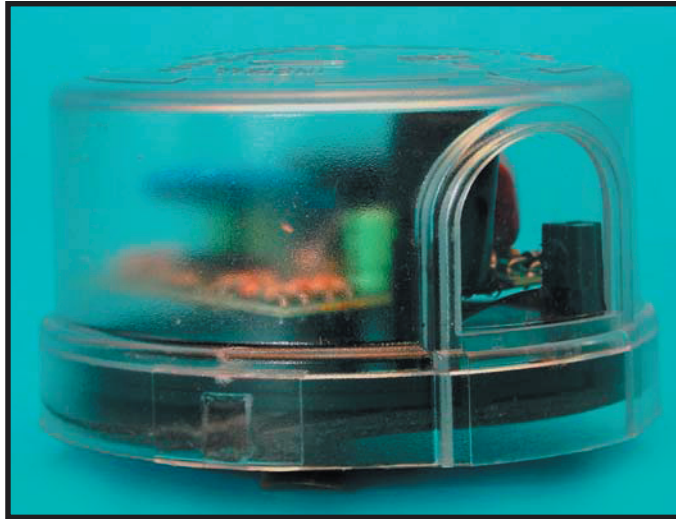

Effective security lighting is a first line of defense against crime. Act now to protect your lights against false operation.

After being turned off, typical security lights remain off for a number of minutes.

LK-2 Series

Light Keeper II™ CRIME PREVENTION Locking Type Photocontrol

FPLK-2

LK-2 Unique light sensing, multi-voltage, three prong locking type photocontrol for dusk to dawn control of roadway, area and security lighting fixtures.

Specifications

Three prong locking type electronic photocontrol with projectile resistant housing, cadmium sulfide photocell light sensing elements with unique light pipe system, early twilight turn-on, cannot be disabled from typical artificial light sources from the ground, 105-305 VAC, 1,000 W/1,800 VA, surge protected, meets or exceeds ANSI C136.10.

Model	Description
LK-2	Anti-Crime photocontrol
LK-2-PR	Anti-Crime with projectile resistant cover
LK-2-FAA	Anti-Crime with FAA required turn-on (35 FC)
